DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-17,29-30,35-36,41-42,47-48, 53-69, 81-83,88-89, 93-95,99-101, drawn to image reading apparatus comprising a time measuring part being able to measure different times selectively, classified in class 358, subclass 449.
 - II. Claims 18-20, 32,38,44,50,70-72,84,90,96,102, drawn to an image reading apparatus treating one or a plurality of sheets of original as one document comprising: a display part and a confirming/editing part, classified in class 358, subclass 448.
 - III. Claims 21-28,33, -34,39-40,45-46,51-52,73-80,85-86,91-92,97-98,103-104, drawn to an image reading apparatus treating one of a plurality of sheets comprising a registering part and a reading part, classified in class 358, subclass 403.
 - IV. Claims 31,37,43,49, drawn to an image processing system comprising a storage device storing therein image data, classified in class 358, subclass 450.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I-IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope

Art Unit: 2625

and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombinations listed above have separate utility such as registering part, storage part, display/confirming part, and time measuring part. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction were not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103 (a) of the other invention.
